

Wallover Product:

WS8035 IAC

Application:

General Machining

Time Period:

One Month

Summary:

Customer was using Grotan to treat the bacteria that was present on large forgings when they were delivered to the plant. Because the customer had concerns about using a biocide like Grotan in their plant, the decision was made to look for a biocide-free product that would inhibit the growth of bacteria while still being operator-friendly.

Results:

Once the plan started using Wallover's WS8035 IAC, bacteria was virtually eliminated. As proof of this result, no cases of dermatitis have been reported since the reformulated Wallover product was introduced.

Conclusion:

The Wallover Advantage! Wallover works with its customers to solve difficult-to-solve problems resulting in a safer and more productive workplace.
